What we do

The remit of the Scottish Medicines Consortium (SMC) is to provide advice to NHS Boards and their Area Drug and Therapeutics Committees (ADTCs) across Scotland about the clinical and cost-effectiveness of all newly licensed medicines, all new formulations of existing medicines and new indications for established products (licensed from January 2002). 1. PATIENT EXPERIENCE

Patients will be at the heart of everything we do. We believe that patients deserve access to the best pharmacy service wherever and whenever they present.

Strategic intents

Over the next three years we will:

- 1.1 Ensure that throughout the delivery of their care, the patient will have access to the right medicines and pharmaceutical care, at the best time and in the best place for them.
- 1.2 Ensure that patient safety is at the heart of practice to guarantee the highest possible standard of care.
- 1.3 Improve patient and public understanding of pharmacy and how it benefits their lives.
- 1.4 Contribute to the development of the knowledgeable patient, improving the provision and understanding of information about their medicines in a language and medium that is appropriate for them.

TO ACHIEVE THIS

Patients will be at the centre of any redesign of pharmacy services to help support a continuous improvement in patient-focused care.

SHARED CARE PROTOCOL

Aripiprazole

clinical indication: **Schizophrenia**

Version 2: May 2010

due for review: **May 2012**

Introduction

Clinical studies indicate that second generation "atypical" antipsychotics are

as effective as first generation antipsychotics in the treatment of positive symptoms. They have fewer side effects, including fewer weight gain effects. They are also more appropriate for long-term use as they are more tolerable and have fewer side effects. Increased weight gain is a concern with some antipsychotics. NHS Quality Improvement Standard (NHS QIS) requires that drugs if they

decline to prescribe. This leaflet provides information on **aripiprazole** treatment guidelines for the shared commitment

Shared Care Protocol and information for GPs – *Aripiprazole* for treatment *schizophrenia*

Shared Care Responsibilities

Aspects of Care for which the Consultant is responsible

- To assess the patient, establish the diagnosis and determine a care plan
- To initiate therapy, arrange prescription and evaluate over the first 6 weeks
- To continue to arrange prescription until the patient's condition is stable
- To review the patient and treatment at least once a year
- To ensure the patient is fully informed about their treatment
- To notify any changes in care plan

Aspects of Care for which the General Practitioner is responsible

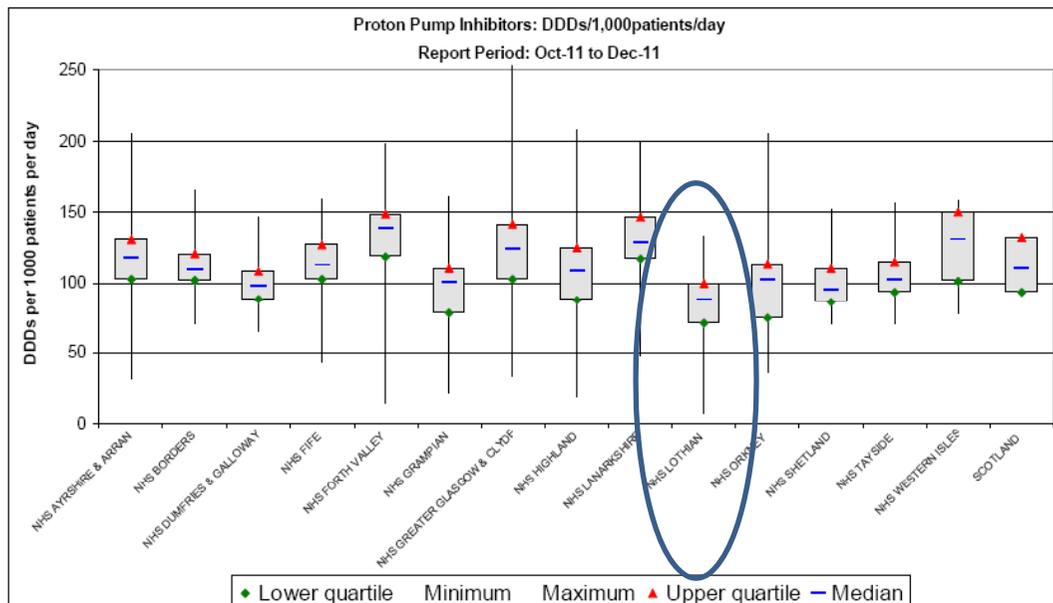

- To continue with prescribing once the patient's condition is stable
- To review the patient in accordance with agreed care plan
- To request earlier specialist review or seek specialist advice when necessary
- To notify psychiatrist of any relevant changes in other medications

Indicadores terapéuticos

1a. Proton Pump Inhibitors: DDDs per 1,000 patients per day.

This indicator measures the volume of proton pump inhibitor (PPI) prescribing. The quantity and strength of each drug preparation is used to calculate a standard measure of volume using the WHO defined daily dose (DDD). The sum of DDDs for all the medicines within the class is calculated. The total DDDs is then normalised to allow comparison between practices using their registered populations. A further level of normalisation is applied which calculates a standard time period.

Lower use of Proton Pump Inhibitors is the desirable therapeutic aim.

BNF SECTION: 2.5.5.1 ANGIOTENSIN-CONVERTING ENZYME INHIBITORS (ACEIS)

The Lothian Joint Formulary recommendations:

Hypertension:

First choice: lisinopril

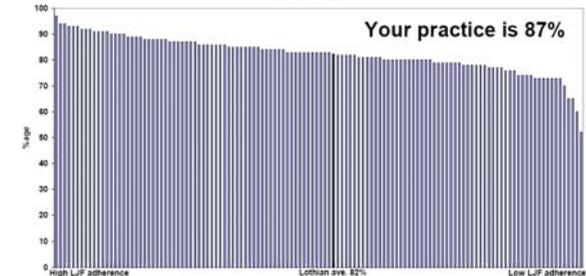

Heart failure and prophylaxis of cardiovascular events:

First choice: lisinopril or ramipril

LJF Prescribing notes

- Refer to the Lothian Hypertension Guidelines.
- For heart failure the dose of the ACE inhibitor should be titrated to a 'target' dose (or to the maximum tolerated dose if lower). See BNF.
- Ramipril should be prescribed as a once daily dose. Patients who have been initiated on twice daily dosing should be switched to an equivalent once daily dose.
- In patients who are intolerant of ACE inhibitors, an angiotensin-II receptor antagonist may be considered as an alternative (see section 2.5.5.2).
- Urea and electrolytes should be checked within 2 weeks of commencing therapy and after any change in dose.

LJF ACEIs as a percentage of all ACEIs (not including ARAs) items prescribed / Each practice in Lothian / Oct-Dec 2011 data

Minor Ailment Service - Remuneration

Payment for the Minor Ailment Service is made on a capitation basis calculated on the number of registrations held within the Central Patient Registration System the calculation is carried out on the last day of each month.

Band	Number of Registrations	Annual Payment	Monthly Payment
1	1-250	£7,300.92	£608.41
2	251-500	£9,253.92	£771.16
3	501-750	£11,208	£934.00
4	751-1000	£13,218	£1,101.50
5	1001-1250	£15,228	£1,269.00
6	>1250	£15,228 +£8.04 per patient above the threshold	£1,269.00 + £0.67 per patient above the threshold

WHAT DOES THE SERVICE OFFER?

- You will be able to get advice and free treatment from your community pharmacist for minor illnesses and ailments such as:

acne	headache
athlete's foot	head lice
back ache	indigestion
cold sores	mouth ulcers
constipation	nasal congestion
cough	pain
diarrhoea	period pain
ear ache	thrush
eczema and allergies	sore throat
haemorrhoids (piles)	threadworms
hay fever	warts and verrucae

- If your pharmacist feels that it is better for you to see your GP then they may refer you directly or tell you to make an appointment with your GP.

Pacientes en tratamiento crónico (CMS)

The NHS Chronic Medication Service – a new service for people with a long-term condition

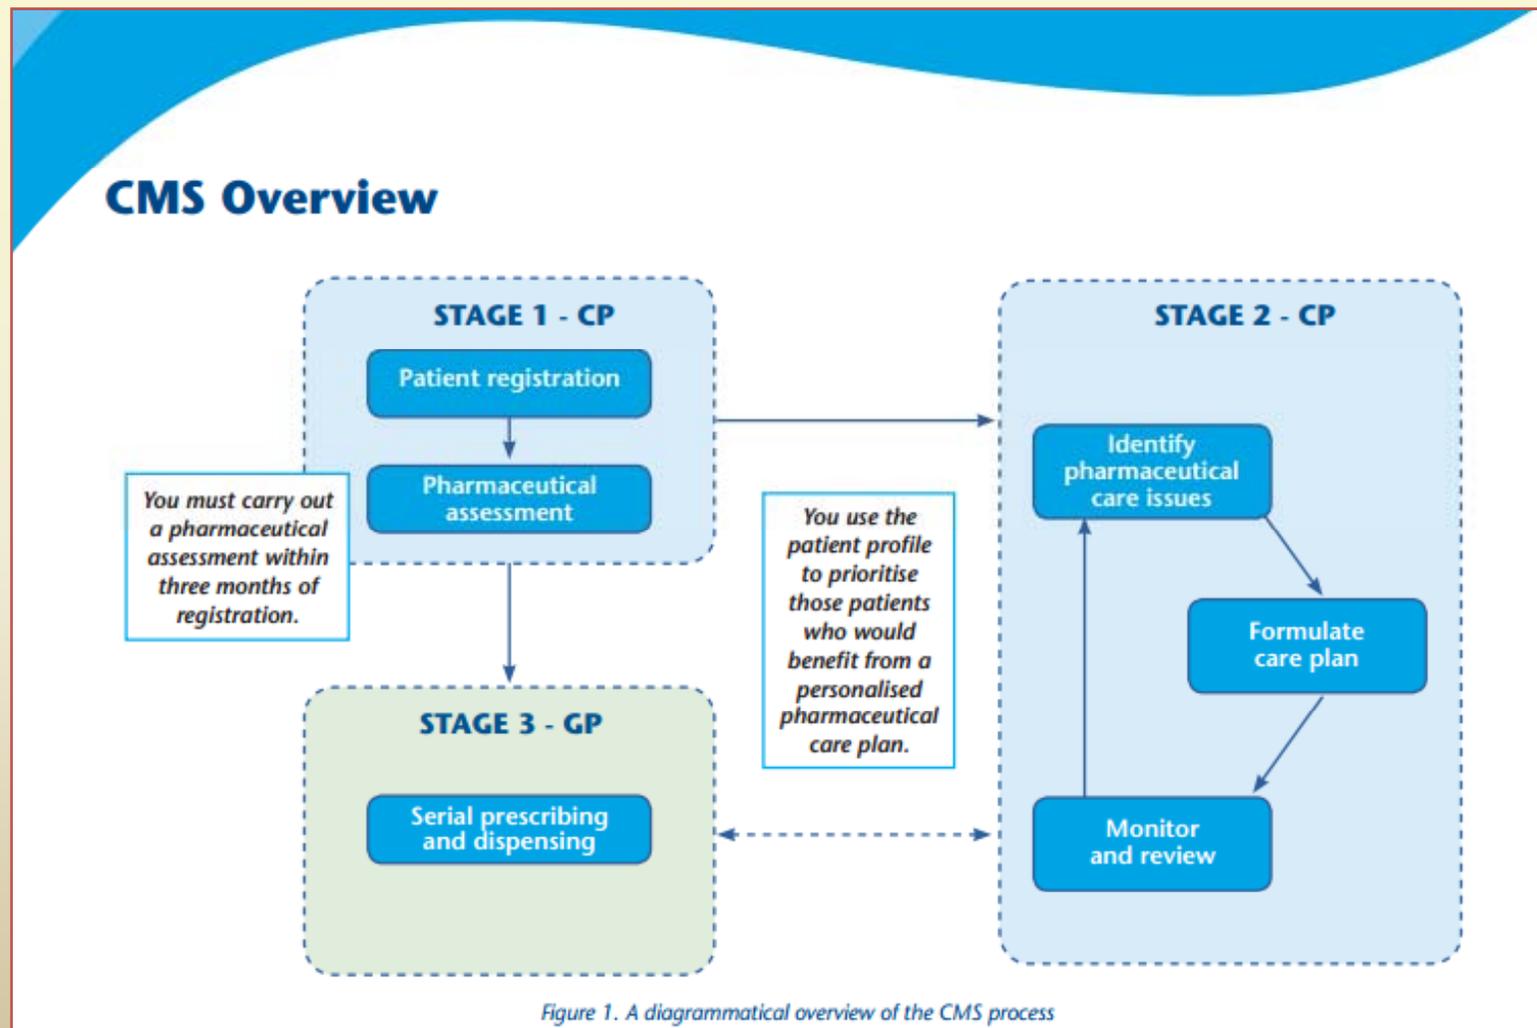

The Chronic Medication Service is an NHS service for patients with a long-term condition to help patients get the best results from their medicines.

- Modelo que promueve el cuidado integral de pacientes con enfermedades crónicas
- Favorece la colaboración entre los distintos profesionales y evitar duplicidades
- Mejora de la eficiencia en el transmisión de datos entre ámbitos

Fase muy inicial, período de transición, pruebas
No tienen conexión informática “on line” con los Centros de Primaria
De momento “No esta financiado”

CMS : Consta de tres etapas.

1. Registro en la base de datos
2. Diseño del plan y seguimiento terapéutico
3. Generación de recetas

Establishing Effective Therapeutic Partnerships

A generic framework to underpin the Chronic Medication Service element of the community pharmacy contract

A Report for the Chief Pharmaceutical Officer

CMS - 2009

COMMUNITY PHARMACY

STAGE 1: PATIENT REGISTRATION

- A patient with a long term condition/s registers with the community pharmacy of their choice
- A patient must be registered with a GP practice in Scotland
- A patient can only register with one pharmacy
- An electronic message is sent to the GP practice

STAGE 2: PHARMACEUTICAL CARE PLANNING

- The pharmacist identifies and prioritises patients with unmet pharmaceutical care needs
- The patient and pharmacist discuss and assess the patient's condition/s, medicine/s and general health
- The patient and pharmacist identify any issues/ problems and agree any actions to address them
- The agreed actions are documented in a pharmaceutical care plan
- The care plan is periodically monitored and reviewed

STAGE 3: SHARED CARE

- The patient's GP decides on their suitability for a serial prescription for up to 48 weeks
- The pharmacist cares for the patient over the time period according to national, evidence-based clinical protocols supported by the care plan
- Relevant information is shared between the GP and pharmacist with informed patient consent
- The GP carries out the QOF medication review at the end of the duration of the serial prescription

GENERAL PRACTICE

STAGE 1: PATIENT REGISTRATION NOTIFICATION

- Patient registers with a community pharmacy for CMS
- An electronic registration notification message is sent to the GP practice
- GP IT systems flags a patient CMS registered
- GP can issue a serial prescription for the patient

STAGE 2: SERIAL PRESCRIPTION

- GP generates serial prescription (up to 48 weeks)
- Pharmacist dispenses serial prescription over the time period supported by national, evidence-based clinical protocols
- Dispensing information is sent electronically to the GP practice
- Pharmacist sends an electronic end of care treatment summary, including a request for a new serial prescription/s
- This triggers the annual QOF medication review

STAGE 3: QOF MEDICATION REVIEW

- The dispensing and end of care period treatment information summary is available in the GP IT system
- The GP undertakes a medication review using information provided in the end of care treatment summary
- The GP produces the next serial prescription
- Any relevant information is updated on the GP IT system

Is it up to date?

Yes. Its contents are regularly reviewed to ensure that it is up to date.

What about new medicines?

New medicines will be included if they represent an advance over current medicines.

What if I am allergic to a medicine recommended in the Formulary or if I have had a medicine before and it doesn't suit me?

The Lothian Joint Formulary will include most of the medicines your doctor might need to prescribe in most situations. Not all medicines suit all patients and there will be times when doctors will need to use medicines that are not in the Lothian Joint Formulary.

Is this happening only in Lothian?

No. Other regions in Scotland use formularies as well as many other countries throughout the world.

Can I find out more about the Lothian Joint Formulary?

Yes

You can view the latest version on the internet. Visit at www.ljf.scot.nhs.uk
